

Retirement Income Simulator

Detailed retirement income projections in seconds, making online retirement planning simple.

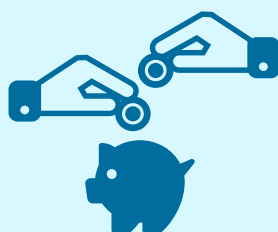

The Retirement Income Simulator is a powerful web-based financial calculator that takes all of Mercer's actuarial smarts and in-depth knowledge of the superannuation industry to create projections of members' future retirement income.

An intuitive user interface combined with our robust projection engine gives members the information they need to engage with their super and plan for a comfortable future.

Comprehensive projections

Project future income, including factors such as voluntary contributions, investment decisions, career breaks, and relationship status.

Age pension calculations

Calculate future age pension entitlements based on assets and projected income, and predict the age a member might become "age pension dependent."

Up-to-date legislation

The Retirement Income Simulator is constantly updated with the latest changes to pension and superannuation legislation.

User friendly, feature rich

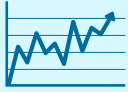

Member data pre-population

Align the Retirement Income Simulator with individual member data, so it pre-populates their super details automatically.

Summary of key information

The simulator provides a brief text summary of key figures in retirement projections in addition to detailed graphs.

Retirement plan stress test

Explore a number of market scenarios to better understand the variability of possible retirement projections.

Projection summary statement

Save projections as a detailed statement, or email it for later viewing.

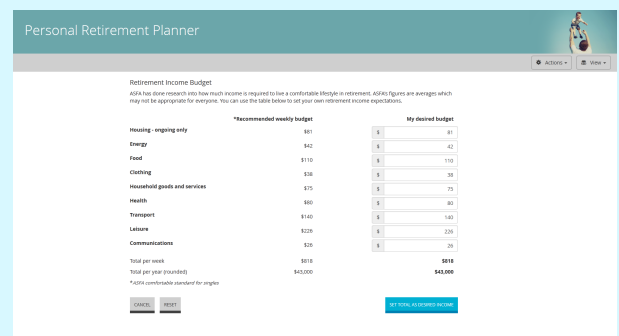

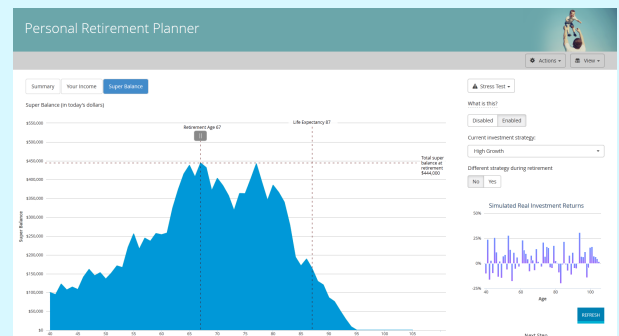

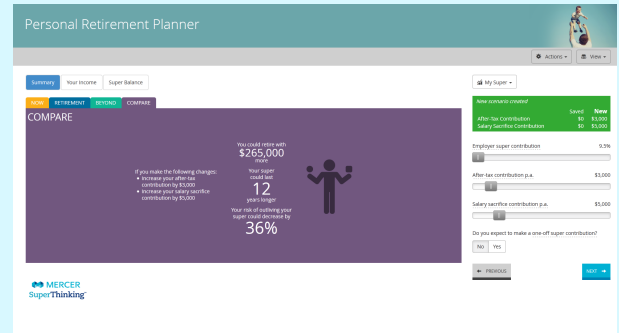

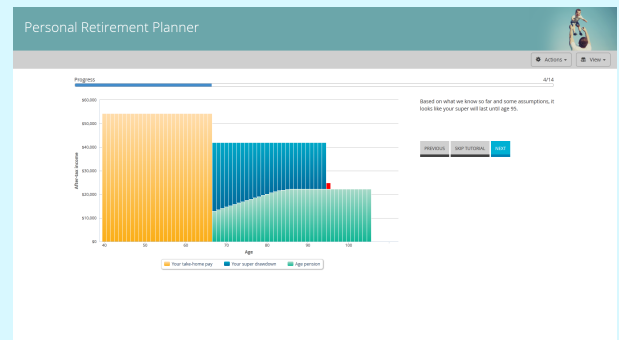

Quality assured

The Retirement Income Simulator has been reviewed and signed off by lawyers and actuaries as compliant with regulations.

Brand customization

Customize your Retirement Income Simulator with images, colours, text and fonts to match your fund's branding.

Ahead of the competition

Interactive tutorial

A step-by-step tutorial helps users understand how changing their retirement plan can impact their future.

Retirement budget planner

Estimate a desired income based on a weekly budget for various retirement needs.

Scenario comparison

Compare multiple scenarios on the same chart for a direct visual indicator of the impact of changes to retirement plans.

Responsive layout

A responsive layout presents information in an optimal way for any screen size, including tablets and mobile phones.
